

SUSA Corporation

Industrial Self-Contained Cleaning System

Clean stamping dies, machine parts, and more with the purchase of a SUSA Corporation industrial self-contained cleaning station. Removing contaminants from stamping dies and parts are critical to their function and necessary for the preparation of future stages in the manufacturing process (welding and assembly). Hot, high pressure, recirculated, filtered aqueous solution cleans in a fraction of the time. Additionally, these systems also cut costs and reduce the number of unnecessary supplies required to run daily operations in your business.

Self-Contained: No floor drains required	Portable: No disassembly to relocate	Easy Clean Design: Full access tank top doors
---	---	--

Environmentally Friendly

This method is considered to be more environmentally friendly than manually completing the process, as fewer toxic solvents can be used and the run-off oils can be distilled and processed. The adjustable high pressure wash pump works in sync with the filters to recycle aqueous cleaning solution and allow for 6 months to 1 year before fluid draining.

Every machine includes a recirculating spray pump, tank floor and drain, and structural steel grillage.

Additional Purchases

- Electronic 24-hour/7 day timer
- Oil Skimmer
- Automatic water make-up
- Steel splash curtains
- Tank insulation
- Low water safety shut-off
- Splash curtain assembly (vinyl) 8' tall
- Perimeter duct exhaust system
- 304 stainless steel construction - reservoir tank
- Automatic pump shut down
- High pressure pump 10gpg at 1,000psi

About SUSA Corporation

With over 30 years of experience in the industry, SUSA Corporation is known for manufacturing innovative, state-of-the-art industrial processing systems that assist in increasing productivity and performance within your company's daily operations. From design, build, and installation to superior after-sales service, our company's main focus is to exceed customer expectations while establishing lasting relationships to sustain increased client satisfaction.
